

## DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Course Code & Name : CSB1332 & DESIGN PROJECT  
Year / Semester : III / VI  
Section : C  
Title of the Project : ONLINE LOST AND FOUND PORTAL

### ABSTRACT

The Online Lost and Found Portal is an intelligent web-based system designed to simplify the process of reporting, tracking, and recovering lost items through a centralized digital platform. The system allows users to register and log in securely, report lost or found items by providing details such as item name, description, category, location, date, and images, and search for matching items through an organized interface. The portal integrates database management, search and filtering mechanisms, and AI-based item matching techniques to improve the accuracy and efficiency of connecting lost items with their rightful owners. Users can also manage their reports through a personalized dashboard and receive updates regarding potential matches. By transforming the traditional manual lost-and-found process into a smart digital solution, the system reduces time and effort, improves accessibility, enhances communication among users, and significantly increases the chances of successful item recovery in institutions and public environments.

**Keywords:** Online Lost and Found Portal, Artificial Intelligence (AI), Item Matching, Web Application, Search and Filtering, Database Management, Digital Item Tracking.
